MARKET COMMENTARY

DCE iron ore futures continued to fluctuate in a day, the main contract closed 689, an increase of 2.13% throughout the day. the quotation in the morning was increased by 10 yuan/mt over yesterday. some traders were active to sell, steel mills purchased on demand. Today the overall market transaction atmosphere is acceptable. PBF at Shandong port dealt 805-808 yuan/mt, increased 0-5 yuan/mt over yesterday; SSF at Shandong port dealt 490-500 yuan/mt, increased 0-10 yuan/mt over yesterday; PBF at Tanshan port dealt 815-818 yuan/mt; increased 5-10 yuan/mt over yesterday; PBF at Jiangnei port dealt 835 yuan/mt; increased 5 yuan/mt over yesterday;

The domestic operating rates of blast furnaces rose though the production of some still mills in Shanxi and Hebei was restricted by the heavy air pollution. Hence the iron ore demand is likely to increase, coupled with the restocking demand ahead of the Chinese New Year, which will offer some support to iron ore prices. On the other hand, however, as the arrivals at ports were still on the rise and the port inventory stood at a high level, the iron ore prices are expected to rise only limitedly.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
