MARKET COMMENTARY

DCE iron ore futures market falling trends,the main contract closed 699.5 , an decrease of 2.03% throughout the day; The spot quotation in the morning almost kept steady. The market overall wait-and-see sentiment heavier. total transactions remained insipid. PBF at Shandong port dealt 815 yuan/mt, decreased 0-10 yuan/mt from last Friday; PBF at Tangshan port dealt 820-825 yuan/mt; SSF at Tangshan port dealt 510 yuan/mt, decreased 5 yuan/mt from last Friday; Recently, Tangshan, Hebei province, and other places lifted the second-level alert for heavy pollution as a new cold wave hit. Some blast furnaces resumed production. But Tianjin epidemic aggravation, causing market concern. Drag up the mine price. SMM believes that steel mills have not completed the replenishment before the Spring Festival, iron ore demand is still incremental, it is expected that in the short term, the price will still shock operation.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
