MARKET COMMENTARY

DCE iron ore futures continued to fluctuate in a day. an increase of 3.07% throughout the day. the main contract closed 737.5. some traders negotiation pattern is more flexible. total transactions is batter. PBF at Shandong port dealt 835-845 yuan/mt, increased 10-20 yuan/mt over yesterday; SSF at Shandong port dealt 530-540 yuan/mt, increased 5-15 yuan/mt over yesterday. PBF at Tangshan port dealt 840-850 yuan/mt. The Brazilian state of Minas Gerais, which accounts for about 40% of Vale's 2021 production, has been hit by heavy rains for the past two days. Mining and transportation at mines such as Vale have been affected to some extent, raising concerns about iron ore supply. Give ore price strong support. Considering the winter Olympics policy has not landed, northern production has been suppressed, iron ore prices remain volatile operation.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
