MARKET COMMENTARY

DCE iron ore futures continued to fluctuate in a day, an increase of 0.46% throughout the day. the main contract closed 769. the quotation in the morning was increased by 5-10 yuan/mt over yesterday. Today there are still sporadic a small amount of just need to purchase, but the overall market transaction is relatively quiet. SSF at Shandong port dealt 575 yuan/mt, increased 5 yuan/mt over yesterday; PBF at Tangshan port dealt 900 yuan/mt,increased 10 yuan/mt over yesterday; This week, SMM counted blast furnace operating rates at 80.13%, up 0.58 percentage points on a weekly basis and 1 percentage point on a monthly basis. East China, southwest part of the short-term maintenance of the resumption of production led to a small increase in operating rates. At the same time give ore prices certain support. Considering the replenishment of warehouses before the Spring Festival has ended, the Winter Olympic Games will be officially opened, and steel enterprises in the north will reduce and stop production according to the production limit requirements. Iron ore demand has fallen in the short term, and it is expected that the price of ore will continue to shock tomorrow.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
