MARKET COMMENTARY

DCE iron ore futures continued to fluctuate by 1.05%.the main contract closed 821. the quotation in the morning was increased by 20-30 yuan/mt over yesterday. some traders were active to sell, Some steel mills tended to be wait-and-see. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 965-970 yuan/mt, increased 10-15 yuan/mt over yesterday; SSF at Shandong port dealt 640 yuan/mt, increased 15 yuan/mt over yesterday; PBF at Tangshan port dealt 970-972 yuan/mt, increased 15-20 yuan/mt over yesterday; According to data tracked by SMM, 57 ships arrived at domestic main ports in January 31 – February 6. Arrivals of cargoes are estimated to stand at 8.8 million mt, down 1.39 million mt from the previous week and down 8.28 million mt year on year. Shipments that departed Australian ports were estimated to rise 0.22 million mt week on week to 15.97 million mt, up 3.54 million mt on the year. And that from Brazilian ports decreased 1.14 million mt to 4.01 million mt on a weekly basis, down 1.65 million mt on the year. The arrivals at ports dropped significantly in the last session due to hurricane in Australia and rainstorm in Brazil, which are expected to return to normal as the rainstorms in Brazil have basically ended. On the other hand, the steel mills in north China received strict production restrictions, while others mostly consumed in-plant inventories, resulting in weak demand. Nonetheless, considering the restocking demand after the Lantern Festival, iron ore prices will gain relatively strong support and hover at a high level.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
