MARKET COMMENTARY

DCE iron ore futures rose largely today，an increase more than 3% throughout the day.the main contract closed 821.5. some traders negotiation pattern is more flexible. some traders were active to sell, steel mills purchased on demand. Port spot turnover has picked up. PBF at Shandong port dealt 950-970 yuan/mt, increased 20-40 yuan/mt over yesterday; SSF at Shandong port dealt 600-620 yuan/mt, increased 10-30 yuan/mt over yesterday; PBF at Tangshan port dealt 950-955 yuan/mt, increased 20-30 yuan/mt over yesterday; SMM analysis, with the consumption of steel mills inventory, the need for replenishment gradually increased. Superimposed after the End of the Winter Olympics expected to resume production, give strong support to the mine price, in the short term or will be strong shock.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
