MARKET COMMENTARY

DCE iron ore futures continued to fluctuate in a day by 0.31%.the main contract closed 805. the quotation in the morning was increased by 20-30 yuan/mt over yesterday, some traders were active to sell, but some steel mills tended to be wait-and-see,and purchasing enthusiasm is not high. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 970-980 yuan/mt, increased 0-15 yuan/mt over yesterday; SSF at Shandong port dealt 630-635 yuan/mt, increased 10-25 yuan/mt over yesterday. As of Feb. 11, stocks at 35 ports tracked by SMM totaled 154.19 million tons, up 5.17 million tons from before the Spring Festival. And the average daily port clearance volume significantly decreased from 722,000 tons to 2.365 million tons. On the one hand, during the Spring Festiva, the efficiency of major domestic ports decreases; In addition, environmental protection control in some areas has been tightened recently, and some ports have been required to stop using diesel trucks ,and gas trucks with national V and below emission standards have been evacuated from the ports. The efficiency of the evacuation continues to decline, leading to the obvious accumulation of port inventory. Considering the impact of environmental protection restrictions such as winter Olympics and heating season this week, it is difficult to see a significant increase in daily port opening, and port inventory is expected to maintain a relatively high level. Ore prices are under pressure. In addition, the National Development and Reform Commission will recently send a joint research team to some commodity exchanges, key ports to carry out iron ore market supervision research, iron ore prices are expected to continue to shock next week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
