MARKET COMMENTARY

DCE iron ore futures market falling sharply trends by 6.82%. the main contract closed 776.5. Some traders adopt separate quotations. Market wait-and-see sentiment increased. total transactions is poor. PBF at Shandong port dealt 930 yuan/mt, decreased 40 yuan/mt from last Friday; SSF at Shandong port dealt 580-585 yuan/mt, decreased 40-50 yuan/mt from last Friday. SMM analysis, since January, due to the resumption of production expectations and macro positive news, iron ore has been in a fast rising trend, especially before and after the holiday, although iron ore demand is poor, but iron ore prices are rising, divorced from the fundamentals. Development and Reform Commission issued three consecutive statements, iron ore prices began to fall. Superimposed on the recent port inventory back to the peak, tomorrow will continue to be weak shocks.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
