MARKET COMMENTARY

DCE iron ore futures intraday limited. the main contract closed 699.The spot quotation in the morning quoted cautious. The market is mainly wait-and-see , Port spot transaction is very few. SSF at Shandong port dealt 510 yuan/mt, decreased 70 yuan/mt over yesterday. According to data tracked by SMM, 81 ships arrived at domestic main ports in February 7-13. Arrivals of cargoes are estimated to stand at 12.47 million mt, up 1.8 million mt from the previous session and down 1.16 million mt year on year. Shipments that departed Australian ports were estimated to drop 1.6 million mt week on week to 14.37 million mt, down 0.94 million mt on the year. And hat from Brazilian ports rose 0.75 million mt to 4.76 million mt on a weekly basis, down 1.57 million mt on the year. The total arrivals of imported ore increased significantly from the prior session, and the combined shipments from Australia and Brazil also declined slightly. Currently speaking, the shipments from Brazil were stable, while those from Australia dropped palpably due to local hurricane. Generally speaking, the shipments from overseas were low, while the port inventory was still on the rise, indicating sufficient supply. On the other hand, the production of sintering machines was still restricted by the Winter Olympics, reducing the demand for iron ore. It is expected that iron ore prices will be pressured and drop in the near term, combined with the government intervention.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
