MARKET COMMENTARY

DCE iron ore futures open lower and go higher, the main contract closed 822.5, an increase only 0.43% throughout the day; but as the disk continues to decline. some traders were active to sell, Some steel mills purchasing enthusiasm are not high. total transactions remained insipid. PBF at Shandong port dealt 930-950 yuan/mt; prices are mixed today over yesterday. SSF at Shandong port dealt 644-650 yuan/mt; increased 5 yuan/mt over yesterday. SSF at Tianjin port dealt 670 yuan/mt; decreased 3 yuan/mt over yesterday. Affected by the COVID-19, Tangshan implemented the whole area closed control, traffic and transportation standstill. The epidemic situation in Shandong Binzhou has not been alleviated. Two places of raw materials and timber transport stagnation, a number of steel mills stuffy furnace, iron ore demand rapid decline, in the short term, the price of weak shock operation.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
