IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jul 2nd, 2026		CFR Qingdao, USD/dry tonne							Today's DCE iron ore futures showed weakness after rallying in the night session. Contract I2609 settled at 740 yuan/ton, up 0.48% from the previous trading day. Port spot prices rose 5-8 yuan/ton versus the prior session. Trader activity was moderate, with steel mills procuring on an as-needed basis, spot trading volumes have remained unremarkable so far. The iron ore supply-demand fundamentals remain largely stable, with supply on the loose side. Going forward, the pace of mine shipments is expected to slow, keeping the overall picture relatively steady. On the demand side, Southeast Asian steel exports have entered the off-season, prompting regional traders to actively cut prices to compete for market share. As a result, domestic export demand has begun to soften. However, domestic steel inventories still have buffer room, and this is unlikely to trigger production-cut intentions among steel mills in the near term. On the news front, aside from supply-tightening rumors for specific varieties, there are no events decisive enough to drive market direction. Taken together, iron ore prices are expected to trade in a range-bound pattern in the short term.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions																				
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
