MARKET COMMENTARY

DCE iron ore futures stop falling and rebounds ，the main contract closed 809 ，an decrease of 2.53% throughout the day; the quotation in the morning was increased by 5 yuan/mt over yesterday. some traders were active to sell, steel mills purchased on demand. today's overall market transaction significantly improved. PBF at Shandong port dealt 923-930 yuan/mt; increased 5-10 yuan/mt over yesterday. SSF at Shandong port dealt 693-710 yuan/mt; increased 20-30 yuan/mt over yesterday. PBF at Tangshan port dealt 925-930 yuan/mt; increased 5-10 yuan/mt over yesterday. SSF at Tangshan port dealt 700-705 yuan/mt; increased 20-25 yuan/mt over yesterday. SMM tracking data shows that the current period is expected to be 12.246 million tons of cargo, the arrival of 250,000 tons less than the previous period, 36,000 tons more than the same period last year. During this period, The outbound shipments from Australia decreased by 450,000 tons to 18.01 million tons, an increase of 4.3 million tons over the same period last year. Brazil's outbound shipments increased by 580,000 tons to 6.1 million tons, up 590,000 tons from the same period last year. The amount of imported ore to Hong Kong in this period decreased slightly month-on-month, while the overall shipment from Australia and Brazil increased slightly. Recently, the shipments from Australia and Brazil have reached the year-on-year level, and the arrivals to Hong Kong are relatively stable. However, due to the impact of the epidemic in China, the blast furnace operation of steel enterprises is insufficient. Taking into account the approaching of the May Day holiday, the pre-holiday replenishment demand increased slightly, supporting the mine price.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
