MARKET COMMENTARY

DCE iron ore futures market rose by 1.87% today, the main contract 2209 closed 871.5. The spot quotation in the morning almost kept steady. some traders were active to sell, Some steel mills tended to be wait-and-see, and purchasing enthusiasm is not high. total transactions remained insipid. PBF at Shandong port dealt 970-985 yuan/mt; increased 5-10 yuan/mt from last Friday. SSF at Shandong port dealt 755-760 yuan/mt; increased 15 yuan/mt from last Friday. PBF at Tangshan port dealt 978-982 yuan/mt; increased 5 yuan/mt from last Friday. SSF at Shandong port dealt 755 yuan/mt; the same as last Friday. At present, although the whole area of Tangshan area unseal, but logistics transport is still limited. Superimposed on the resurgence of the COVID-19 epidemic in northeast China, some small steel mills choose to reduce production of stuffy furnace. Overall, iron ore demand increment is more limited, but considering the end of the May Day holiday, steel stock replenishment expectations; Superimposed financial meeting to boost the market, is expected to continue strong shocks in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
