

Fearnleys Dry Bulk Weekly

Nov 11, 2026

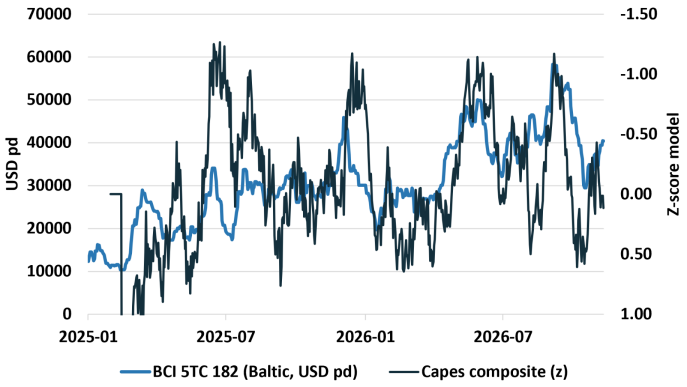

Capesize/Newcastlemax

The model below consists of factors like the global ballast/laden vessel ratio, West of Singapore ballasters, and a couple of other AIS indicators. Below the charts are tables showing where the model sits currently. It is only at extremes that these models give very clear suggestions about the near-term outlook.

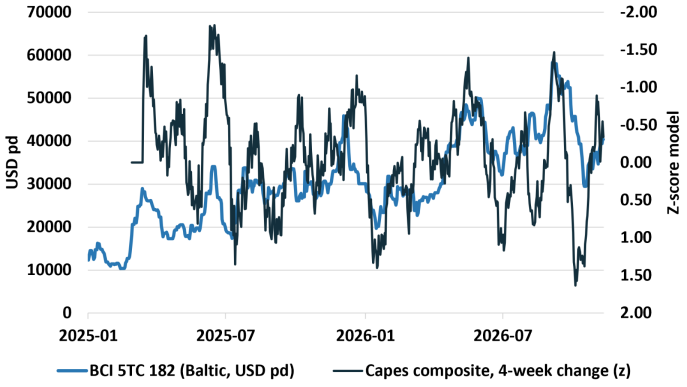

The momentum model dropped out of bearish territory, primarily due to fewer ballasters West of Singapore. Still, it's worth pointing out that the bearish signal given last week will be "live" next week; at the same time the bullish signals given in mid-October will no longer be in play (2 to 4 weeks is the timeframe the models are good at predicting).

In the last 6 weeks, total South Atlantic shipment volumes were up 18.6%% compared to the corresponding weeks last year, continuing the improving trend. Brazil iron ore exports growth has been negative for eight straight weeks (down 14% yoy over those seven weeks), but Guinea bauxite exports growth has seen a renewed surge, with the last 6 weeks being 43% higher than the same period last year.

Cape/Newc Composite Model

Cape/Newc Composite Model - 4 Weeks Change

Capesize composite vs forward BCI 5TC (182k), USD/day

Average forward BCI change by composite reading. Latest 10-Nov-2026: +0.12 (highlighted). Readings = number of daily model readings in each bucket. Historical averages, not forecasts.

Model reading	Readings	+2w $/d	up %	+3w $/d	up %	+4w $/d	up %

Source: Fearnleys Research; AIS & Baltic Exchange. Jan-2025 through 10-Nov-2026; partial 11-Nov excluded. Rates carried on non-publication days. Buckets include lower and exclude upper boundary. Daily windows overlap; counts are not independent samples.

Panamax/Kamsarmax

Shipment volume growth continues to be lower than DWT supply growth. Through week 45, growth was 2.5%, compared to DWT supply growth of 4.7%. Over the last 10 weeks, volume growth was -0.1% compared to the same period last year.

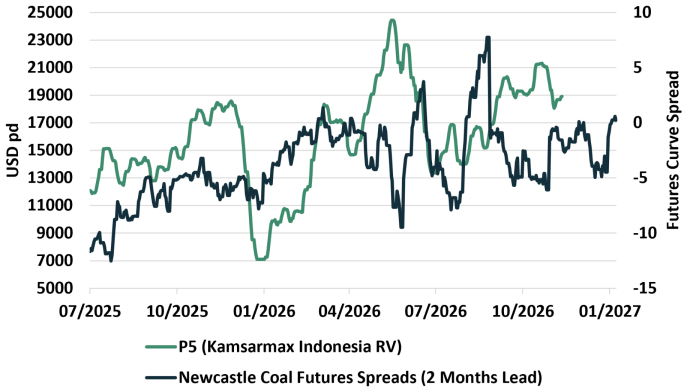

Both the Pacific and South Atlantic indicators suggest the market rebound could soon stop. The coal futures curve backwardation has continued to rise, however, which suggest positive momentum on that front in the coming months.

Top left chart: Shipment volumes were up 2.5% year on year through week 45. In the last ten weeks, volumes were down 0.1% compared to the same period last year. Supply growth was 4.7% at the latest reading.
Top right chart: The 2-month lead of the coal futures curve suggests the market could slowly trend upwards in the next two months.
Bottom left chart: The indicator suggests this rebound could soon be over.
Bottom right chart: The indicator suggest the P6 rebound could soon be over.

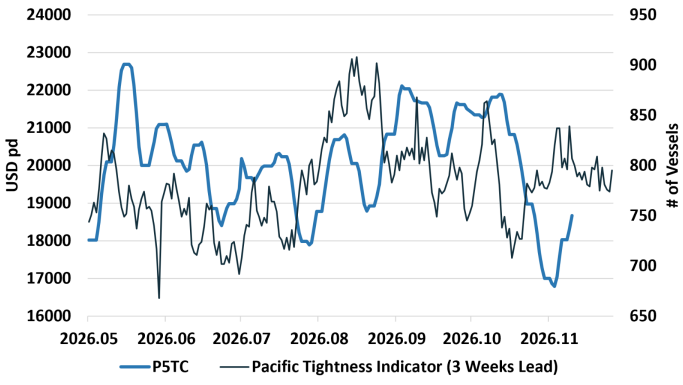

Weekly Shipment Volumes

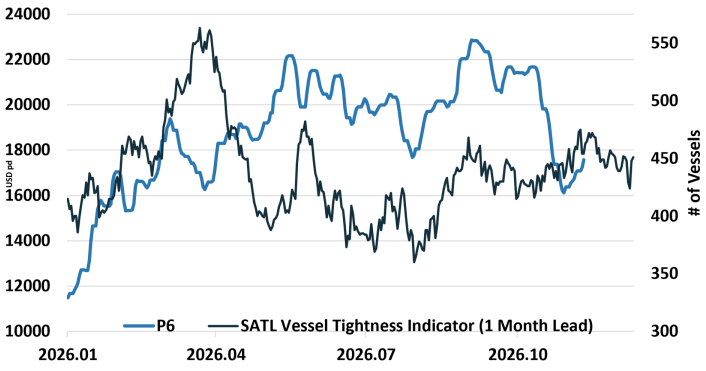

P5 vs Newcastle Coal Futures Curve Spread (Lead 2 Months)

P5TC vs Pacific Vessel Tightness Indicator (Lead 3 Weeks)

P6 vs South Atlantic Vessel Tightness Indicator (Lead 1 Month)

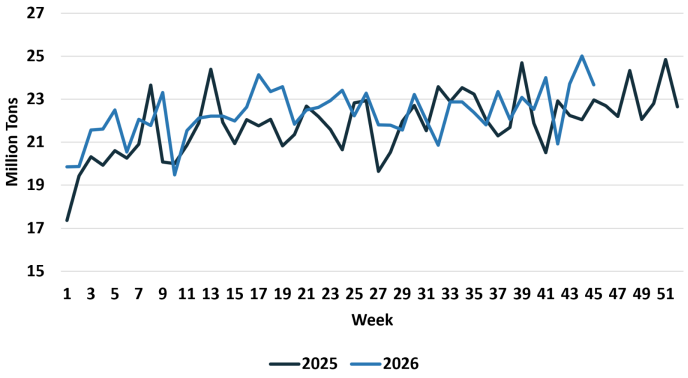

Supramax/Ultramax

Through week 45, shipment volume growth was 3.0% year-on-year, whereas over the last 10 weeks, growth was 2.9% compared to the same period last year. DWT supply growth continues at 5.5% year-on-year.

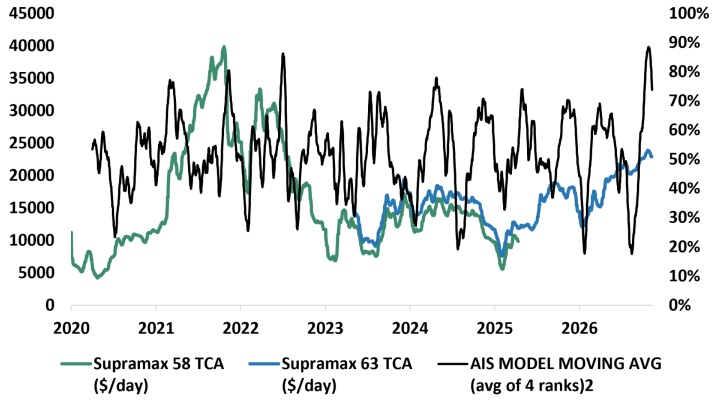

We added an AIS-based market model/indicator to this report. The model is a measure of momentum in major loading areas, and also includes the global ballast/laden vessel ratio. The model is at a high reading, which suggests downside going forward, as illustrated by the table below.

Top left chart: Weekly shipment volumes, 2026 ytd vs 2025.
Top right chart: Supra/Ultra AIS model. Extremely high readings suggest the market will fall in the near term, and extremely low readings suggest the market will rise.
Bottom left chart: The industrial metals index is composed of copper, aluminium, zinc and nickel, and weighted according to market value. The 9-month change of this index has a high correlation with the 9-month change of the Ultramax 1-year TC rate, and leads by about 3 months.
Bottom right table: This table shows the average statistical outcome following given readings of the model.

55% to 65%	590	60	47%	56	50%	248	58%
65% to 70%	204	−167	54%	−150	50%	−315	50%
70% to 75%	**91**	**−44**	**58%**	**−210**	**48%**	**−307**	**41%**
75% to 80%	43	−381	56%	−1,103	41%	−1,750	32%
≥ 80%	42	−1,114	13%	−2,496	25%	−4,993	25%
All observations	*2,416*	*94*	*54%*	*195*	*55%*	*291*	*57%*

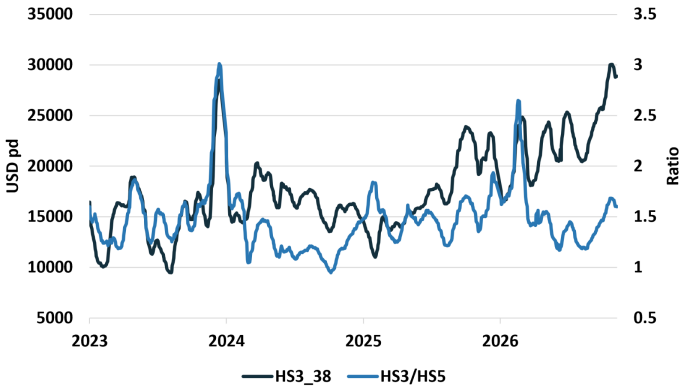

Source: Fearnleys Research; AIS & Baltic Exchange. Mar-2020 through 10-Nov-2026; partial 11-Nov excluded. TCA = Supramax 58 to Apr-2025, 63 after. Buckets include lower and exclude upper bound; top bucket includes 100%. Daily windows overlap; counts are not independent samples.

Handysize

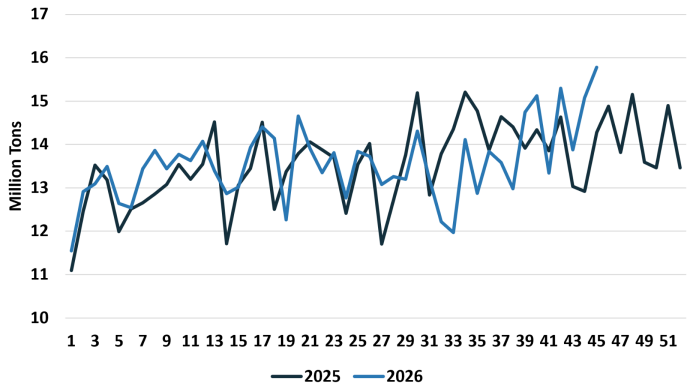

Through week 45, shipment volumes grew by an estimated 0.7% compared to last year. DWT supply growth remains at 3.2%. The market remains firmer than the weak headline figures suggest. In the near term, the softening of the Ultramax segment suggests the Handysize market will soon start falling.

Top left chart: The ratio between Rio-Recalada / Skaw-Passero (HS3) and SEA / Singapore-Japan (HS5) is usually a good predictor of tops and bottoms of the HS3 route. A higher ratio suggests a market top, and a lower ratio suggests a market bottom.
Top right chart: Through week 45, Handysize shipment volumes were 0.7% higher year on year, declining from the 3%+ figures seen in the last months. DWT supply growth was 3.2% at the latest reading.
Bottom left chart: The correlation between the S11TC and HS7TC is over 90%. The correlation is even higher when the S11TC index is shifted forward a few days, which means that movements in the S11TC index often lead the movements of the HS7TC.
Bottom right chart: The change in the price of copper is usually an accurate leading indicator for asset values.

Disclaimer

1. Introduction

The statistical and graphic information set forth in the analysis is compiled by Fearnresearch and based on the databases and time series supplied by Fearnresearch, the research division of Fearnleys AS, and other external sources of information. Fearnresearch compiles, processes and publishes data for the benefit of the brokering departments of Fearnleys AS and its clients. Its methodologies for collecting data, and therefore the data collected, may differ from those of other sources, and its data do not reflect all or even necessarily a comprehensive set of actual transactions occurring in the market. Certain estimates may be based on prevailing market conditions. There can be no assurance that such data reflect actual market conditions.

Data compilation, especially for earlier historical periods, is subject to limited audit and validation procedures. Both closed and open sources, interviews and market intelligence to gain information on different topics may be used. Accordingly, there can be no assurance as to the accuracy or completeness of the estimates, advice, statements and any other information contained in the analysis.

2. Risks

Research coverage of Fearnleys AS encompasses solely companies within the shipping sector. This sector is cyclical by nature and will over time presumably experience higher volatility than the overall market.

3. Confidentiality

Pursuant to Fearnleys' Code of Conduct, all employees of Fearnleys AS are subject to duty of confidentiality towards clients and with respect to handling inside information. All employees shall follow strict information handling procedures and other organizational procedures to minimize conflicts of interest within Fearnleys and between clients.

4. General Disclaimer of Liability

The analyses, estimates, advice, statement and any other information contained in the analysis are prepared and presented in good faith. However, neither Fearnresearch, Fearnleys AS nor any of their subsidiaries, associated companies, organisations, management personnel, employees, agents or independent contractors (collectively the "Fearnley Interests") shall under any circumstances be under any liability for any losses, damages or costs caused to any person, company or other legal entity arising or resulting directly or indirectly from reliance on any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information contained in the analysis resulting directly or indirectly from any negligent or gross negligent act(s) or omission (s), or wilful misconduct, committed by any of the Fearnley Interests.

In the event that a court or tribunal, notwithstanding the above liability exemptions, should hold any, some or all of the Fearnley Interests liable in damages for any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information, the liability shall not under any circumstances whatsoever exceed in total ten (10) times the fees payable for the analysis in question, or US$ 100,000 (United States Dollar Hundred Thousand), whichever is the higher.

Under no circumstances whatsoever shall the individual or individuals who have caused the losses, damage or costs be held personally responsible or liable in any way. The Fearnley Interests shall under no circumstances whatsoever be liable for punitive damages.

The analysis is prepared to the benefit of the named addressee only. No other third party may rely on the analysis or any of its content without prior written approval of Fearnley Consultants AS.

Should any part of this clause be held unenforceable, non-operative or invalid by a court or tribunal, the remaining parts shall remain in full force.

5. Processing of Personal Data

The processing of personal data within Fearnleys AS is subject to strict rules and regulations. Our Privacy Policy describes the procedures for processing personal data according to the General Data Protection Regulation (GDPR). Please see our homepage for more information on this.
