01 Tankers

VLCC

The VLCC market has been on a downward trajectory in the week gone by and yesterday saw another downward rate correction. In contrast to yesterday's TD22 Baltic assessment (USD 41.67m) a report suggested last night that USD 36 mill was done for a USG/China run, later denied and the ship in question pushed as open again this morning, but nevertheless indicates the direction of travel. TD34 came in at WS 411 and change, but a fixture has surfaced this morning at WS 360 for a Fujairah/Japan run, albeit on a ship discharging in Fujairah so will calculate fantastic with no ballast to speak of despite the lower rate - but this will of course add fuel to fire. However, all said and done – or to be done – daily returns at USD 350-400k/day give/take is not to be sniffed at, and owners would have bitten your arm off for that this time last year. As Carl Jung is known to have said: "It all depends on how we look at things, and not how they are in themselves."

Whilst more active on the demand side we don't have much meat on the bone as far as November dates are concerned, we are priced out of USG/Transatlantic moves by AFRAs and VLCCs are hot on our heels for all Atlantic volumes, operating on a 24H time delay before correcting down with us. As such, against weak supply side fundamentals [14 FOC pushed, 4 discharging, 7 arrived at disport and 17 total ETS within 5-days for TD20] there remains downward pressure in the Atlantic. Versus Atlantic earnings TD6 is preferable ex Central Mediterranean for CPC players even below last done levels i.e. WS 450, and East of Suez the pile up continues, exacerbating the impact of a longer VLCC list. Overall without a demand side safety net then supply side length dictates persistent softness regardless of noise.

Aframax

North Sea
North Sea rates have kept softening with a general lack of activity and surrounding weakening markets keeping the downward pressure on rates. Natural dates have pushed out to the end of the 2nd decade which is forcing the early tonnage to make a decision, accept waiting or ballast. Unlike the last couple of months where it has been an obvious choice where to ballast, at the moment it isn't such a clear road between Mediterranean and USG. We still have some more room for softening before we will see rates stabilise.

Mediterranean
There has been healthy activity quietly this week that has helped to mop away a good number of vessels. Dates are into the 3rd decade for all ports now and owners are feeling that the bottom has been established. Sideways seems to be fair for the balance of the week but this remains to be seen. A bit more activity will push the momentum the other way.

Capesize

The Pacific saw renewed interest today as rates climbed. Fixtures this morning for end November were being done around the USD 14s before later climbing to mid-high

USD 14 flat for C5. In the Atlantic, C3 Brazil/China saw levels remaining around the USD 35-36 mark this week, with fixtures today concluding at high USD 35s for early December laycan. Another mid December stem was fixed at low USD 36 levels. Owners are holding firm with their bids in the USD 37s range today as FFA signals a minor climb in rates. In the North Atlantic, fresh transatlantic and backhaul stems have sparked new interest, with a Seven Islands/El Dekheila stem fixing in the USD 21s range. In the short term as bunker prices are expected to take a dip, some charters are holding off in the hope for a rates correction, while others are looking to forward bookings and beginning to cover their January and February stems.

Panamax

The Panamax market extended its recovery this week, with the BPI rising every session as Atlantic tonnage tightened, and the Pacific firmed early before leveling off. The North Atlantic led the move: prompt tonnage in the north was scarce, transatlantic and fronthaul grain rates moved up day by day, and ECSA held firm for late-Nov and early-Dec arrivals, while backhaul stayed flat. In the Pacific, fresh Australian and Indonesian coal and steady demand for modern eco ships supported rates early in the week, but by midweek more open tonnage in South China met a thinner Australian cargo list and little NoPac grain, and the transpacific began to ease. Our own data points to a more cautious near term, with volume growth still trailing fleet growth and our Pacific and South Atlantic tightness indicators suggesting the rebound may soon stall, although rising backwardation in the coal futures curve should offer some support over the next couple of months.

Supramax

On Supramax segment the Atlantic continues to show improving sentiment, with North America strengthening on fresh enquiry and owners increasingly firm on transatlantic requirements. The South Atlantic appears to have stabilised, with a better supply-demand balance, while the Continent and Mediterranean remain relatively tight. In contrast, Asia has softened amid lacklustre activity, with Indian Ocean and backhaul routes remaining under pressure. Southeast Asia is broadly steady, although fresh enquiry remains limited. Overall, the Atlantic is currently outperforming the Pacific, with sentiment gradually improving across the former.

and little change in underlying fundamentals. USG remains strong, with improving demand and owners showing increased resistance on prompt positions. The Continent and Mediterranean remain subdued, with little fresh impetus to drive rates either way. The South Atlantic is broadly balanced, with participants largely holding their positions. Asia remains relatively steady, although holiday-related disruptions have kept activity subdued.

Chartering

A quieter week so far, with fewer than a handful of fixtures concluded in the USD 312–320 pmt H/C range via PC, with the latest fixture reported at USD 312 pmt. The arb

concluded for December and a relatively thin position list, fundamentals remain supportive. We therefore expect the market to hold around current levels over the next few days.
