MARKET COMMENTARY

DCE iron ore was was shocked and keep downward all the day.The main contract closed at 786.5,decreased of 0.82%. Traders are generally motivated to ship, Speculative demand increases. Steel mills are mainly on the sidelines, and market turnover continues to pick up.PBF at Shandong port dealt 780-795 yuan/mt;,decrease15 yuan/mt than yesterday;SSF at Shandong port dealt 660 yuan/mt;PBF at Tangshan dealt 777 -790 yuan/mt,decrease 10-23yuan/mt than yesterday. Affected by geopolitical news, the market sentiment panicked, and the futures disk fell slightly. From a fundamental point of view, the supply and demand pattern of the steel market is slowly improving, but the terminal demand has not yet improved significantly. According to SMM research, on August 3, the blast furnace operating rate according to SMM statistics was 89.45%, an increase of 0.74 percentage points from the previous week. The blast furnace capacity utilization rate was 90.01%, up 0.19 percentage points from the previous week. At present, the news of steel plant maintenance and production resumption is mutual, resulting in a slow recovery of the average daily hot metal production. The confidence in the stable development of the macro is still there, and it is expected

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
