01 Tankers

VLCC

It’s been a fixing frenzy in the week gone by and tonnage availability in the East and globally now is lower than at any stage during the last two weeks, and rates set to rise further. T34 paper has been traded at WS 650 for November and now asking higher, underpinning the general sentiment that the physical market is around the WS 650+ mark for same despite lack of “proof” that same has been concluded. However, a couple of reported fixtures Yanbu/East in the mid WS 700’s, a trade normally yielding a 100-point premium give or take over Fujairah/GOO, also support same. A Brazil export cargo destined for China was concluded at WS 555 yesterday, up 20 points from last done and further evidence of a strengthening market. Oil prices are also on an upward trajectory after a Houthi missile attack on Saudi Arabia's biggest oil refinery yesterday. Both oil and shipping markets are anxiously waiting for greater clarity on President Trump's next move toward Iran with strong rumours of a planned attack after the midterm election on November 3rd.

9 offers on one West Africa cargo is slightly misleading - a huge flat rate commanding the appetite - as overall FOC availabilities, particularly of non-compromised ships, are very low and supply constriction in the 2 week window is relevant again now that we are only fixing around 18 days forwards. CPC has only fixed down on a relet, and Guyana & USG business will not be afforded the additional buffer eastern ballasters give West Africa. Suezmax share in West Africa has also returned after 1st decade activity on VLCC picked up a little after October placed a record 88MBBLS on Suezmaxes at the expense of VLCCs. East of Suez despite lengthening of availabilities we are on a collision course with a firmer VLCC market where availabilities have once again constricted. That could underpin the bottoming and potential firming of the Atlantic basin for the time being.

Aframax

North Sea
Rates have remained relatively steady from last week with limited market activity. With relets in position and what looks like a fairly light crude program in the first decade, natural window should push beyond the 10th without much in the way of fixtures. Tonnage in the early part of the list still has options to ballast to Mediterranean and US markets to avoid waiting time. There has been a lack of tonnage ballasting transatlantic, which we expect to increase heading into November, which will even without market activity keep the available tonnage from growing too much.

Mediterranean
It's a rollercoaster week so far in the Mediterranean with replacement jobs done well above the WS 900 mark but the normal fixing window is getting fixed back to where it was at the end of last week. Ceyhan should be done for the 1st decade of November with nothing close to WS 800 being paid with bigger flats than the Augusta. Expecting rates to remain north of WS 750 depending on minimum flat and dates.

Capesize

After a fairly flat start to the week, the Cape market surged following a flurry of fixtures since yesterday afternoon. Pacific C5 West Australia/China showed more

concluded in the low USD 14s range. Today some cargoes for early November were done in the mid-high USD 14s with one rumor of a fixture at USD 15 linked to Cargill (laycan to be confirmed). The Atlantic saw a similar story as the Baltic paper gained 5% today. A fresh wave of cargoes came to market, with charterers bidding in the USD 34-35s range for second half November laycans. December stems are bidding similarly in the USD 35 range. This morning we saw one fixture was reported at USD 35 for a 25 November stem from Cargill on a standard Cape, and a Newcastlemax fixed today at USD 34.25 for Brazil/China. More recently we hear reports of a fixture in the high USD 35s-36 range. Some owners are showing some reluctance to offer as bullish sentiment is expected to show some mild rate increases in the near term.

Panamax

The Panamax market has weakened across both basins this week, with lower fixtures confirming that the Pacific's earlier support is giving way. In the Atlantic, fresh grain and mineral demand remains too thin to absorb available tonnage, while the long November ECSA ballaster list continues to push transatlantic and fronthaul rates lower. The Pacific is now following, as fewer Aussie and NoPac cargoes compete for the ships available, and softer Indo coal demand gives charterers more room to press rates. Period interest remains selective, with owners' ideas still above buyers' levels and the weaker forward curve limiting commitments. Our vessel-tightness indicators suggest scope for a bounce after this correction, but shipment growth still trails fleet growth, leaving us cautious about how far any recovery can run into winter.

Supramax

The Supra market remained relatively subdued, with limited fresh activity and most reported fixtures concluded earlier. The Continent and Mediterranean remain broadly balanced, while the USG and South Atlantic are softening amid cautious charterer demand. Asia continues to show positive sentiment, supported by tight tonnage and steady cargo demand, although rate increases are beginning to plateau. The Handy market was similarly quiet, with soft conditions across the Continent and Mediterranean. The South Atlantic remains relatively firm on tightening tonnage and fresh demand, while the USG is broadly stable. Asia continues to show resilience, supported by tight prompt tonnage and a steady cargo book. Overall, fresh enquiry will be key to sustaining momentum across both segments.

Chartering

After a brief rally that saw cargoes conclude around the USD 330/t level in the middle of last week, freight rates have gradually softened, with recent fixtures reported below USD 315/t. Market activity remains subdued and some of the fixing is occurring behind closed doors, contributing to an overall quieter sentiment.

We have registered 28 fixtures for Nov thus far (7/9/12 by decade), and market attention is now shifting toward December, where three spot fixtures ex-US Gulf have been concluded so far.

The East-West arbitrage remains open and continues to support cargo economics at current freight levels. While vessel availability remains broadly balanced against demand, the recent correction suggests charterers have regained some negotiating power. Going forward, participants will be closely monitoring fixture volumes and fresh cargo emergence to determine whether rates have found support or if further downside remains likely in the weeks ahead.
