MARKET COMMENTARY

DCE iron ore was shocked sharply all the day. The main contract closed at 741,increased of 2.28 %. Traders are more motivated to ship. Steel mills are mainly on the sidelines, and market turnover continues to pick up. PBF at Shandong port dealt 785-790 yuan/mt; increase 5-10 yuan/mt than yesterday. PBF at Tangshan dealt 793-795 yuan/mt, increase 3-5 yuan/mt than yesterday. From a macro perspective, the US CPI index was released last night, with a year-on-year increase of 8.5%, which is lower than the market expectation. The inflation level may have peaked. There is a possibility that the Federal Reserve's interest rate hike level may be lowered in September, and market confidence has rebounded significantly. Basically, according to the inventory data of the top ten ports tracked by SMM, the total inventory of the ten ports accumulated 3% month on month to 86.97 million tons this week, and the coarse and fine powder block ores accumulated in varying degrees. At present, the recovery speed of terminal demand is slow, and the continuous resumption of production of blast furnaces in steel plants drives the increase of demand for replenishment of raw materials. However, the rise of raw material prices has compressed the profits of steel plants, which may

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
