MARKET COMMENTARY

DCE iron ore was was shocked and keep downaward all the day.The main contract closed at 685,decreased of 1.72%. Traders are generally motivated to ship. Steel mills are more mainly on
the sidelines, and market turnover continues to pick up.PBF at Shandong port dealt 725-728 yuan/mt,decrease5-15 yuan/mt than yesterday; SSF at Shandong port dealt 630 yuan/mt,decrease 5 yuan/mt than yesterday.PBF at Tangshan dealt 733-735 yuan/mt,decrease 3-5 yuan/mt than yesterday. With the resurgence of the domestic epidemic, the pessimistic sentiment of the market has increased, and the optimism about the peak season expectations has weakened, and the futures market is weak. According to SMM's research, on August 31, the operating rate of blast furnace according to SMM's statistics was 94.35%, with an increase of 1.19 percentage points on a weekly basis. The capacity utilization rate of blast furnace was 95%, and the cycle ratio increased by 1 percentage point. At present, the raw material inventory of the steel plant is low, and there is a certain replenishment demand to support the ore price. It is expected that the iron ore price will fluctuate widely in the

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
