MARKET COMMENTARY

DCE iron ore futures declined by 0.41% today, the main contract closed 732.5. The traders' willingness to ship is less .The steel mills are purchase on demand. The overall trading sentiment of the market is less. PBF at Shandong port dealt 715-729 yuan/mt,decrease 9-18 yuan/mt; PBF at Tangshan port dealt 735 yuan/mt,derease 3-10 yuan/mt. Affected by the national epidemic situation, the downstream construction was affected, causing market panic, and the futures market continued to decline. According to SMM statistics, the impact of blast furnace maintenance this week on molten iron is 202.77 tons, 31400 tons less than that of last week. The blast furnaces in some areas have resumed production in succession, and the daily average hot metal output is expected to increase slightly in the later period. In terms of supply, the fourth quarter was still the peak of overseas shipment. Last week, Western Australia Mining Company was more active and rented a large number of ships in the spot market. On the whole, short-term iron ore prices may be subject to a correction.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
