MARKET COMMENTARY

DCE iron ore futures rose by 1.31% today, the main contract closed 732. The traders' willingness to ship is less .The steel mills are purchase on demand. The overall trading sentiment of the market is less. PBF at Shandong port dealt 730-736 yuan/mt,increase 10-15 yuan/mt; PBF at Tangshan port dealt 741 yuan/mt,increase 6 yuan/mt. According to SMM statistics, the inventory of the top ten ports this week slightly accumulated 2.7% to 92.11 million tons. In terms of varieties, only pellets went to the warehouse slightly. First of all, the domestic pellet mineral volume decreased this week, which supported the demand for imported pellets. Secondly, the profits of the steel mill in the past month have been restored, and the willingness to purchase pellets has also been improved. In the near future, the supply and demand side are stable, and the port inventory is not contradictory. Short term iron ore prices continue to fluctuate mainly.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
