MARKET COMMENTARY

DCE iron ore futures rose by 1.35% today, the main contract closed 828. The traders' willingness to ship is more.The steel mills are more active to purchase.The overall trading sentiment of the market is better. PBF at Shandong port dealt 815-823 yuan/mt,decrease 7 yuan/mt; PBF at Tangshan port dealt 823-838 yuan/mt. According to SMM statistics, SMM's global iron ore shipments last week totaled 33.85 million tons, a decrease of 2% month on month. Australia sent 15.69 million tons to China, a decrease of 9.7% month on month; Brazil sent 3.92 million tons to China, up 26% month on month. The total amount of iron ore arriving at the port in China was 23.7242 million tons, a decrease of 2.4% month on month, and the supply of iron ore contracted slightly. In terms of demand, the resumption plan of some blast furnaces was delayed this week, and the output of molten iron may decline, affecting certain iron ore consumption. However, the stock of raw materials in the steel plant is low, and the demand for replenishment still exists; In addition, considering that the increase in the number of people infected by the current epidemic may affect the market sentiment, it is expected that the iron ore price will still fluctuate widely.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
