MARKET COMMENTARY

Today, iron ore futures continued to fluctuate upward. The most-traded I2505 contract closed at 782.5 yuan/mt, up 0.71% throughout the day. Traders were active in selling, with a strong sentiment to stand firm on quotes. Steel mills were cautious in procurement, and some mills had bidding plans. Today's market trading volume was moderate. In Shandong, the mainstream transaction prices of PB fines were 780-785 yuan/mt, stable compared to yesterday; in Tangshan, the transaction prices of PB fines were around 800-805 yuan/mt, also stable compared to yesterday.

According to an SMM survey, as of January 15, the operating rate of blast furnaces at 242 steel mills surveyed by SMM was 85.14%, down 0.19 percentage points WoW. The daily pig iron production of the sample steel mills was 2.3488 million mt, up 2,800 mt WoW. SMM predicts that pig iron production will continue to increase in the next two weeks based on the blast furnace maintenance and production resumption plans of steel mills. Considering the relatively small inventory pressure on the industrial side and the rebound in steel mill profits, short-term support remains strong, and ore prices are expected to continue fluctuating upward this week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
