MARKET COMMENTARY

Today, DCE iron ore futures continued to fluctuate downward. The most-traded I2505 contract finally closed at 771 yuan/mt, down 1.34% throughout the day. Traders remained cautious, with some halting offers; steel mills showed stronger wait-and-see sentiment, with fewer inquiries; and the market transaction atmosphere was sluggish. In Shandong, mainstream transaction prices for PB fines were around 775 yuan/mt, down 5 yuan/mt from yesterday; in Tangshan, transaction prices for PB fines were around 785 yuan/mt, also down 5 yuan/mt from yesterday.

A key domestic meeting was held today, confirming that crude steel production will continue to be controlled through 2025, further validating previous rumors. Pessimistic sentiment intensified. Coupled with the US imposing additional tariffs on China again, ore prices pulled back to new lows under the dual pressure. Attention is on tomorrow's SMM steel inventory data. If inventory starts to decline, the increase in pig iron

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
