MARKET COMMENTARY

Today, DCE iron ore fluctuated repeatedly. The most-traded I2505 contract finally closed at 780 yuan/mt, up 0.45% for the day. Traders sold goods based on market trends, while steel mills purchased as needed, with slightly increased inquiries. The market transaction atmosphere was average. In Shandong, the mainstream transaction prices of PB fines were around 775-780 yuan/mt, up 5-8 yuan/mt compared to yesterday. In Tangshan, the transaction prices of PB fines were around 785-790 yuan/mt, up 5-10 yuan/mt compared to yesterday. The apparent demand for the five major steel products continued to increase, and total inventory continued to decline, remaining relatively low YoY. Notably, rebar maintained destocking even as production increased, showing strong performance and providing some support to various black series products. Although there were still disruptions from crude steel production restriction news during the session, market sentiment remained indifferent. In the short term, there is no imbalance in the industry, and the fundamentals of iron ore are supportive. If no substantial policies on crude steel production restrictions are introduced, iron ore prices still have the potential to break upward.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
