MARKET COMMENTARY

Today, iron ore fluctuated downward. The most-traded I2505 contract finally closed at 777, down 0.58% for the day. Traders showed weak enthusiasm for selling; steel mills restocked as needed; and market transaction sentiment was average. In Shandong, the mainstream transaction prices of P8 fines were around 777-780 yuan/mt, stable compared to yesterday's prices. In Tangshan, the transaction prices of P8 fines were around 785 yuan/mt, down by 0-5 yuan/mt compared to yesterday.

This week, the impact from blast furnace maintenance tracked by SMM was 1.4835 million mt, down 95,500 mt WoW. It is expected to continue decreasing next week. Over the past two weeks, pig iron production has increased rapidly, providing some support for ore prices. However, considering the recent market pessimism regarding end-use demand, the resistance to ore price increases remains significant, and short-term fluctuations are likely to continue.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
