MARKET COMMENTARY

Today, the DCE ore futures opened with a fluctuating rise but weakened in the afternoon. The most-traded contract I2509 finally closed at 707, with a daily decline of 0.07%. Traders' willingness to sell was moderate; steel mills cautiously observed the market, with general inquiries; the market transaction atmosphere was sluggish. In Shandong, the mainstream transaction prices of PB fines were around 762-765 yuan/mt, remaining stable compared to yesterday; in Tangshan, the transaction prices of PB fines were near 770-775 yuan/mt, down 0-5 yuan/mt from yesterday.

Today's industry data showed that the apparent demand for rebar performed impressively. The decline in inventory of the five major steel products expanded. The supply and demand in the industry were healthy. Additionally, the total inventory at SMM's ten main ports decreased by 2.18 million mt MoM. The demand for iron ore was strong, providing price support, and it is expected to hold up well in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
