MARKET COMMENTARY

Today, the DCE iron ore futures held up well throughout the day, with a brief pullback in the afternoon followed by a slight rebound. The most-traded contract I2509 closed at 711, up 0.21% for the day. Traders sold goods according to market conditions, while steel mills showed stronger purchase willingness, mainly purchasing as needed. The market transaction atmosphere was moderate. In Shandong, the mainstream transaction prices for PB fines were around 765-770 yuan/mt, down 0-5 yuan/mt from yesterday. In Tangshan, the transaction prices for PB fines were around 770-778 yuan/mt, down 2-5 yuan/mt from yesterday.

According to SMM statistics, the impact from blast furnace maintenance on pig iron production dropped to 969,000 mt this week, down 191,300 mt WoW. Next week, the impact from blast furnace maintenance is expected to decrease by 36,800 mt WoW. This indicates that the current round of pig iron growth is nearing its end, with limited room for further increases. Although the Sino-US tariff policy continues to

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
