MARKET COMMENTARY

Today, the DCE iron ore futures contract remained stable in the morning but pulled back significantly in the afternoon, trading in the doldrums throughout the day. The most-traded contract I2509 finally closed at 709, with a daily decline of 1.87%. Traders' willingness to sell was moderate, while steel mills showed good restocking demand, particularly at lower levels. The market transaction atmosphere was moderate. In Shandong, the mainstream transaction prices of PB fines were around 760 yuan/mt, down 5-10 yuan/mt from yesterday. In Tangshan, the transaction prices of PB fines were around 765 yuan/mt at Caofeidian Port and around 775 yuan/mt at Jingtang Port, down 5 yuan/mt from yesterday. Supported by both fundamentals and macro news this week, the price center of iron ore continued to move upward. Looking ahead to next week, some steel mills are expected to have restocking demand before the Labour Day holiday, and the overall demand for iron ore will continue to grow. Considering tariff disturbances and the expected lower-than-market-anticipated content of the Politburo meeting, the upside potential of iron ore will be suppressed. Ore prices are expected to continue to rise next week, but the increase will be relatively small.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
