## MARKET COMMENTARY

After opening, DCE Iron Ore futures rose slightly and then pulled back slightly during the session. The most-traded contract I2509 eventually closed at 706, up 0.5% for the day. Traders sold goods according to market conditions. At the beginning of the week, steel mills mainly adopted a wait-and-see attitude and made fewer inquiries. The market transaction atmosphere was average. The mainstream transaction prices of PB fines in the Shandong region were around 710-713 yuan/mt, basically flat compared to last Friday. The transaction price of PB fines in the Tangshan region was around 720 yuan/mt, also basically flat compared to last Friday.

The latest iron ore shipping data from SMM showed that global iron ore shipments increased slightly by 80,000 mt WoW last week, while port arrivals rose slightly by 240,000 mt, with limited overall fluctuations. By region, shipments from Australia and Brazil maintained a slight increase, but shipments from non-mainstream countries such as Peru, Iran, and India pulled back. The total shipments for the entire month of

### Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

**Data Exclusions***

| | 62% | 58% | 65% |
|---|---|---|---|
| Port Index | 0 | 0 | 0 |
| Seaborne index | 0 | | 0 |
| Lump Index 62.5 | 0 | | |

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
