MARKET COMMENTARY

Today, Dalian iron ore futures continued to rebound, with the most-traded contract I2509 closing at 716.5 yuan/mt, up 1.99% for the day. Traders were actively shipping goods. As the weekend approached, purchase willingness of steel mills weakened, but better sales of finished steel in the morning drove some demand growth. The market transaction atmosphere was average. The mainstream transaction prices of PB fines in the Shandong region were around 706-710 yuan/mt, rising slightly by 10 yuan/mt compared to yesterday's prices. In the Tangshan region, the transaction prices of PB fines were around 720-725 yuan/mt, up by 10-15 yuan/mt compared to yesterday's prices.

This week, the expansion of steel mill profits drove a rebound in pig iron production, and iron ore demand was robust, providing rigid support for ore prices. However, affected by nationwide rainfall, the demand for finished steel may weaken. It is expected that the accumulation rate of finished steel inventory will accelerate next week, which will suppress ore prices. Overall, it is expected that iron ore prices will show a trend of

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
