MARKET COMMENTARY

Today, DCE iron ore futures weakened in the morning but surged significantly in the afternoon. The most-traded contract I2509 closed at 722.5, up 1.69% for the day. Traders were actively selling their goods. Steel mills' wait-and-see sentiment intensified, with inquiry volumes decreasing compared to yesterday. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of PB fines were around 710-715 yuan/mt, up 5-10 yuan/mt from yesterday. In the Tangshan region, the transaction prices of PB fines were around 720-728 yuan/mt, also up 5-10 yuan/mt from yesterday.

According to the SMM survey, on July 2, the operating rate of blast furnaces at 242 steel mills surveyed by SMM was 87.54%, down 0.42 percentage points MoM. The daily average pig iron production of the sampled steel mills was 2.4137 million mt, down 4,200 mt MoM. Although news of environmental protection-driven production restrictions emerged yesterday, implementation has been minimal. Steel mills, enjoying

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
