MARKET COMMENTARY

Today, the iron ore futures continued their strong upward trend, with the most-traded contract I2509 surging to 835.5 in the afternoon before pulling back to close at 823, marking a daily gain of 2.49%. Traders were actively offloading positions, while speculative trading remained weak. Some steel mills purchased as needed, but most adopted a cautious wait-and-see approach, with weak purchase willingness. The overall market sentiment was subdued. In Shandong, the mainstream transaction prices for PB fines were around 798 yuan/mt, up 13 yuan/mt from the previous day, while in Tangshan, PB fines traded at around 815 yuan/mt, up 15 yuan/mt. Anti-"rat race" policies and mega-project initiatives fueled sentiment in the ferrous metals series, driving futures prices sharply higher. Iron ore prices have already reached elevated levels, stoking market fears of a pullback. Given intensifying policy uncertainties and limited fundamental demand support, further upside appears constrained in the near term, warranting cautious trading.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
