MARKET COMMENTARY

Today, Dalian iron ore futures dropped slightly, with the most-traded contract I2509 closing at 786, down 1.75% for the day. Traders' willingness to sell was weak. Steel mills adopted a cautious wait-and-see attitude, with some purchasing as needed. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of PB fines were around 770-775 yuan/mt, down 10-15 yuan/mt from Friday last week. In the Tangshan region, the transaction prices of PB fines were around 785-790 yuan/mt, also down 10-15 yuan/mt from Friday last week.

SMM shipping data showed a slight decrease in global shipments, with shipments from Australia rebounding slightly, while shipments from Brazil declined significantly. Additionally, among non-mainstream shipments, shipments from Peru and Iran resumed. However, influenced by the recent sharp drop in carbon element prices, sentiment in the ferrous sector was weak, and iron ore prices followed suit. In the short term,

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
