MARKET COMMENTARY

Today, Dalian iron ore futures held up well, with the most-traded contract rolling over to the I2601 contract, closing at 789, up 1.94% for the day. Traders actively sold off their inventory, while steel mills adopted a wait-and-see approach, with moderate purchase willingness. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of PB fines were around 775-780 yuan/mt, up 5-10 yuan/mt from last Friday. In the Tangshan region, the transaction prices of PB fines were around 790-795 yuan/mt, also up 5-10 yuan/mt from last Friday.

Last week, SMM's global iron ore shipment volume totaled 31.12 million mt, down slightly by 2.38 million mt MoM. However, China's total iron ore port arrivals reached 28.73 million mt, rebounding significantly by 6.17 million mt MoM, an increase of over 27%. As the impact of weather conditions wanes, iron ore port arrivals have increased significantly this week, but this aligns with market expectations, resulting in limited

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
