MARKET COMMENTARY

Today, Dalian iron ore futures rose sharply, with the most-traded I2601 contract closing at 787, up 2.27% from last Friday. Traders' enthusiasm for quoting prices was moderate; steel mills were cautious and mainly purchasing as needed. The market transaction atmosphere was average. In Shandong, mainstream transaction prices for PB fines were around 781-785 yuan/mt, up 15-16 yuan/mt from last Friday; in Tangshan, PB fines transaction prices were around 790-795 yuan/mt, up 15 yuan/mt from last Friday.

Last week, SMM's global iron ore shipments totaled 35.76 million mt, up 6.9% MoM. Among them, Australia's shipments saw a slight rebound; Brazil's shipments pulled back slightly; non-mainstream countries' total shipments increased, with South Africa and India seeing growth, while Peru and Iran experienced declines. SMM's China iron ore arrivals totaled 27.39 million mt, down 1.89 million mt MoM. The continuous growth in iron ore supply put pressure on prices. However, news of an accident-induced shutdown at the Simandou mine over the weekend sparked pessimistic expectations about future supply increases, providing bullish support to ore prices. Meanwhile, as September approaches, expectations for US Fed interest rate cuts have heated up, further driving the sharp rise in ore prices. Nevertheless, considering the constraints of environmental protection-driven production restriction policies, it is expected that ore prices will continue to fluctuate rangebound this week, with limited upside potential.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
