MARKET COMMENTARY

Iron ore futures showed slight strength today, with the most-traded contract I2601 closing at 771.5, up 0.06% from the previous trading day. Traders sold at market prices, while steel mills purchased as needed, with inquiries declining from yesterday. Market trading sentiment remained moderate. In Shandong, mainstream transaction prices for PB fines stood at 765-770 yuan/mt, up 0-3 yuan/mt from yesterday. In Tangshan, PB fines traded around 780-785 yuan/mt, up 5-10 yuan/mt from yesterday.

The resurgence of conflict in the Middle East today drove crude oil prices significantly higher, which in turn lent some strength to ore prices. However, SMM data on blast furnace maintenance impact showed this week's affected volume reached 1.5152 million mt, up 361,900 mt WoW. This continues to exert short-term pressure on ore prices, with a meaningful rebound only expected after environmental protection-driven production restrictions are lifted.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
