MARKET COMMENTARY

Iron ore futures continued to hold up well today, with the most-traded contract I2601 closing at 777 yuan, up 0.71% from the previous trading day. Traders maintained firm offers but showed moderate willingness to sell, while steel mills remained cautious in procurement with limited inquiries. Market trading activity was subdued. In Shandong, mainstream transaction prices for PB fines ranged between 772-775 yuan/mt, up 2-5 yuan/mt from yesterday. In Tangshan, PB fines traded around 785 yuan/mt, up 0-5 yuan/mt.

This week, 18 blast furnaces underwent maintenance while 16 resumed production domestically, with most maintenance concentrated in Tangshan, leading to a sharp decline of 63,200 mt in hot metal output. Production is expected to gradually normalize after the military parade concludes next week, with hot metal output likely to rebound significantly. Market expectations of demand recovery are supporting ore prices to hold up well.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
