MARKET COMMENTARY

Today, the iron ore futures on the Dalian Commodity Exchange were in the doldrums, with the most-traded I2601 contract closing at 796, down slightly by 0.31% from the previous trading day. Traders showed moderate enthusiasm for selling; most steel mills were cautious and observing, while some mills made purchases at lower prices. The market transaction atmosphere was moderate. In Shandong, mainstream transaction prices for PB fines ranged from 790-793 yuan/mt, a drop of 2-3 yuan/mt WoW; in Tangshan, PB fines transaction prices were 795-805 yuan/mt, basically stable WoW.

Last week, global SMM iron ore shipments totaled 33.74 million mt, down 720,000 mt MoM. Shipments from Australia and non-mainstream countries dropped back slightly, while Brazilian shipments, unaffected by the previous port fire, rebounded slightly MoM. During the same period, total arrivals in China amounted to 26.04 million mt, down 2.45 million mt MoM, a decrease of 8.6%. The short-term supply contraction supported ore prices. However, rumors of an iron ore conference on the 18th sparked risk aversion, putting ore prices under pressure. Nevertheless, with hot metal production continuously rising and pre-holiday stockpiling gradually starting, the rigid demand for iron ore still supports price stabilization and rebound. Additionally, as expectations for US Fed interest rate cuts draw near, market sentiment is becoming more optimistic, which could also drive ore prices to rise again.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
