MARKET COMMENTARY

Iron ore futures held up well today, with the most-traded contract I2601 closing at 804.5, down 0.12% from the previous trading day. Traders showed moderate willingness to sell, while steel mills mainly purchased as needed. Market trading sentiment was moderate. In Shandong, mainstream transaction prices for PB fines were around 795-798 yuan/mt, up 0-3 yuan/mt from yesterday; in Tangshan, transaction prices for PB fines were 800-810 yuan/mt, flat from yesterday.

According to an SMM survey, on September 17, the blast furnace operating rate at 242 steel mills surveyed by SMM stood at 86.38%, up 0.22 percentage points MoM. Daily average hot metal production at the sampled steel mills was 2.3983 million mt, up 5,400 mt MoM. Currently, steel mill profits are shrinking, and some enterprises are showing increased willingness to conduct maintenance, leading to a gradual rise in the number of blast furnaces under maintenance. This resulted in a lower-than-expected overall increase in hot metal production this week. However, iron ore demand remains relatively resilient, providing support for spot iron ore prices. Additionally, the US Fed is expected to cut interest rates soon, and market expectations for China's future monetary policy are strong. Ore prices are expected to hover at highs in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
