MARKET COMMENTARY

The iron ore futures rose continuously this morning but pulled back slightly in the afternoon. The most-traded contract I2601 finally closed at 802.5 yuan, up 0.38% from the previous working day. Spot cargo prices at ports were basically flat compared with the previous working day, with PB fines in Shandong transacted at 800-805 yuan, basically unchanged from yesterday's level, and those in Hebei at 810-815 yuan/mt, up 0-5 yuan/mt from yesterday. Trading activity in the market was moderate today, with most traders selling at market prices. Steel mills purchased as needed, and inquiries were limited.

The meeting between the Chinese and US heads of state boosted market sentiment, driving futures higher in the morning session. However, with no further confirmation of news in the afternoon, some bulls chose to take profits, leading to a slight pullback in prices. Overall, as details of the meeting are gradually released, macro expectations remain relatively optimistic, providing some support for iron ore prices. Nevertheless, the continuous rise in raw material prices has significantly squeezed steel mill profits recently, with losses widening at some mills, raising the possibility of involuntary production cuts down the road, which would in turn cap the upside room for ore prices. Taken together, iron ore prices are expected to hold up well in the short term, but the pace of gains is likely to narrow gradually.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
