MARKET COMMENTARY

Today, iron ore futures were in the doldrums, with the most-traded contract I2601 closing at 799.5, down 0.19% from the previous trading day. Traders sold goods following market trends; steel mills purchased as needed. Market trading sentiment was average. In Shandong, transaction prices for PB fines ranged between 793-800 yuan, holding steady from yesterday's levels; in Hebei, transaction prices for PB fines were between 805-815 yuan/mt. Spot market supply of old PB fines was limited, supporting firm transaction prices, though prices for 60.8% PB fines remained stable compared to yesterday.

According to SMM data for the week, the blast furnace operating rate at 242 steel mills was 85.91%, down 0.26 percentage points WoW. Daily average hot metal production at sampled steel mills was 2.3805 million mt, a decrease of 6,800 mt WoW. Based on existing plans, the decline is expected to widen next week, with overall iron ore demand continuing to weaken. Ore prices were under pressure. However, as this week's meeting has not yet been held, year-end market expectations remain. Ore prices have downside support and may continue to fluctuate rangebound in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
