MARKET COMMENTARY

Iron ore prices experienced strong and volatile movements today. The main contract I2605 ultimately closed at 796.5, marking an increase of 2.58% compared to the previous trading day. This represents the largest gain of the fourth quarter. Traders demonstrated moderate enthusiasm for shipments, while steel mills showed limited willingness to procure, with some only purchasing as needed. Market transactions remained subdued. In the Shandong region, the transaction price for PB fines ranged from 795 to 803 yuan, reflecting an increase of 5-10 yuan per ton compared to last Friday. In the Hebei region, PB fines transacted between 812 and 820 yuan per ton, also up by 5-10 yuan per ton from last Friday.

According to SMM shipping data, arrivals this week continued to rise by 2.2%. The supply pressure on iron ore remains on an upward trajectory. However, news emerged today regarding potential production cuts at a Brazilian pellet plant. Additionally, the Ministry of Finance's meeting over the weekend indicated that national subsidies will continue in 2026, boosting market sentiment. Coupled with increased market expectations for a rebound in hot metal production in January and pre-holiday inventory restocking, these factors collectively drove a notable rise in iron ore prices.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
