IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jun 2nd, 2026		CFR Qingdao, USD/dry tonne							The DCE iron ore futures shifted from weak to strong today, with the most-traded contract I2609 closing at 786.5 yuan/mt, up 0.77% from the previous trading price. Port spot prices rose by 3-5 yuan accordingly. Traders actively quoted and sold; steel mills showed increasing wait-and-see sentiment, mainly purchasing as needed; overall market trading activity was moderate. The transaction price of PB fines at Shandong ports was 755 yuan/mt. The transaction price of PB fines at Caofeidian port was 765 yuan/mt. According to SMM's data on blast furnace impact from maintenance, production resumption at large blast furnaces this week were expected to drive hot metal production further up, providing some support for ore prices. However, the increase in hot metal production also boosted steel output, and with end-use demand already weakening, steel inventory pressure was set to rise, making it harder for prices to rise. Therefore, iron ore prices were expected to be under pressure, with increasing short-term upside resistance and limited upside room.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions			
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.			
Alumina %	65.00	62.00	58.00	62.50				
Silica%	1.40	2.25	2.25	1.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
