Utilisation

Aframax market remains balanced as vessel availability improves

- Aframax utilisation rose to 90.6% in Week 45, up 1.3 percentage points YoY, while the tonne-mile index increased 15.8% YoY to 114.4, indicating that cargo demand remains supportive. However, utilisation declined 2.1 percentage points MoM, suggesting that improvements in vessel availability are currently outpacing demand growth.
- Vessel productivity improved across several indicators during the month. Ballast tonnage at anchor declined by 0.6 mdwt on a four-week moving average basis, while anchored capacity fell sharply in the East. At the same time, ballast speeds remained elevated across both basins, supporting faster vessel circulation and effectively increasing available fleet supply.
- Congestion trends also point to a more fluid market. Ballast tonnage at anchor in the Atlantic continued to trend lower compared with earlier in the year, while congestion in key regions such as China and the Pacific remained broadly contained. Although laden anchor days increased by 10.3%, the share of laden vessels declined in both the East and West, indicating that cargo delays have not materially tightened vessel availability.

S No.	Terms	Define
1	Aframax vessel	Crude tanker vessels which have dwt in the range of 80,000 - 120,000.
2	Trading status	Status of vessels has been derived primarily from the navigation field within the AIS message. Vessels which do not have IMO number have not been included in the fleet. Furthermore, vessels that have not returned AIS message for at least 30 days, have been excluded from the analysis of fleet status while vessels that have not returned an AIS message for up to 30 days are assumed to have the same trading status as when last seen.
3	Laden dwt miles	Average distance travelled per week across the laden target fleet multiplied by the average vessel deadweight(or capacity) for that fleet
4	Bunker price	Price of the VLSFO at Singapore Port
5	% Laden	Share of laden vessels in total fleet excluding vessels under repair
6	East	Region East of Suez Canal and comprises China, Pacific, Indian Ocean and Oceania
7	West	region West of Suez Canal and comprises Atlantic region
8	TD7	Spot rates on North Sea–UK Continent route and data have been taken from Baltic Exchange
9	TD8	Spot rates on Kuwait-Singapore route and data have been taken from Baltic Exchange
10	At anchor	Vessels with navigation status ‘At Anchor’ in the waiting zone near port area
11	Moored	Vessels moored in port for loading or discharging
12	Underway	Vessels currently at sea and are currently underway towards their destination
