MARKET COMMENTARY

DCE iron ore open lower and go higher, the main contract closed 689, an increase of 2.23% throughout the day. the quotation in the morning was increased by 0-10 yuan/mt from last Friday. Some steel mills tended to be wait-and-see, and the port spot enquiries were more today, but the transaction is general. PBF at Shandong port dealt 800-805 yuan/mt, increased 0-5 yuan/mt from last friday; SSF at Shandong port dealt 485 -495 yuan/mt, increased 0-5 yuan/mt from last friday; PBF at Tanshan port dealt 810 yuan/mt; increased 2-10 yuan/mt from last friday; PBF at Jiangnei port dealt 830 yuan/mt; SMM analysis, in addition to the beijing-Tianjin-Hebei and surrounding areas of the implementation of off-peak heating season production, some steel mills did not according to the original plan to resume production, other areas have blast furnace production. Superimposed some steel mills before the Spring Festival replenishment demand, iron ore demand this week is still incremental, give strong support to ore prices, in the short term, iron ore prices may continue to be strong shock.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
