MARKET COMMENTARY

DCE iron ore futures continued to fluctuate narrowly, main contract concluded 739, a slightly decrease of 0.7% over yesterday. The overall market atmosphere still keep hot today, which driven by the replenishment enthusiasm before Spring Festival. PBF at Shandong port dealt 835-855yuan/mt, PBF at Shandong port dealt 847-855yuan/mt. The operating rate of blast furnaces tracked by SMM this week was 80.66%, an increase of 0.44% week-on-week; only a few steel mills in North and Central China resumed their BFs' production, and the operating rate rose slightly. As the Winter Olympics approaching, there are frequent reports of production restrictions for steel mills in northern region. It has been a period of time before the replenishment for Spring holiday, and it is relatively difficult to see a significant increase in the demand increment for iron ore. However, the recent heavy rain in Brazil may reduce the supply of iron ore, so SMM believes that iron ore will still support iron ore price in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
