MARKET COMMENTARY

DEC swings down in the morning , but afternoon bounce, the main contract closed 715. an increase of 1.06% throughout the day. The spot quotation in the morning almost kept steady. steel mills purchased on demand。 today's overall market transaction atmosphere in general。 PBF at Shandong port dealt 795-800 yuan/mt, decreased 5-10 yuan/mt over yesterday; SSF at Shandong port dealt 495-510 yuan/mt, decreased 0-5 yuan/mt over yesterday. PBF at Tangshan port dealt 810 yuan/mt. According to data tracked by SMM, 74 ships arrived at domestic main ports in January 10 – January 16. Arrivals of cargoes are estimated to stand at 11.27 million mt, up 200,000 mt from the previous week and down 8.19 million mt year on year. Shipments that departed Australian ports were estimated to increase 0.46 million mt week on week to 17.96 million mt, down 0.71 million mt on the year. And that from Brazilian ports increased 330,000 million mt to 5.22 million mt on a weekly basis, down 0.77 million mt on the year. The total arrivals of imported ore increased slightly from the prior week, and the combined shipments from Australia and Brazil also rose fractionally. Looking into the near future, the iron ore prices are likely to move rangebound under pressures from both the supply and demand side. Some steel mills in Anyang, Henan have been closed due to resurging COVID-19 pandemic, while the restocking of the mills is drawing to an end as the Chinese New Year approaches, resulting in less demand for iron ore. Meanwhile, the port inventory, which is already at a high level, has been rising amid more arrivals at domestic ports as well as rising shipments from overseas ports.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
