MARKET COMMENTARY

DCE iron ore futures continued to fluctuate in a day , an increase of 2.23% throughout the day. the main contract closed 755.5. the quotation in the morning was less, and chosed single discussion. Today the overall market transaction atmosphere is acceptable, Some businesses are optimistic about the future market,shipping enthusiasm turned weak. PBF at Shandong port dealt 860-870 yuan/mt, increased 10-20yuan/mt over yesterday; SSF at Shandong port dealt 550-560 yuan/mt, increased 15-20 yuan/mt over yesterday.. PBF at Tangshan port dealt 865-870 yuan/mt. increased 15-20 yuan/mt over yesterday. Stocks at 35 ports tracked by THE SMM totaled 150.08 million tons as of Jan. 21, down 2,560,000 tons month-on-week. At the same time, the average daily port clearance volume of imported ore increased by 160,000 tons to 3.175 million tons. With the pre-spring Festival replenishment procurement activities of steel mills, the average daily port clearance volume continued to increase recently, leading to a significant drop in port inventory. Considering the last week before the Spring Festival next week, steel replenishment will come to an end, superimposed on the Winter Olympics production restriction policy is about to start, iron ore demand may fall, it is expected that the mine price next week may have a correction risk.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
