MARKET COMMENTARY

DCE iron ore futures strong pull up again by 7.59% throughout the day. the main contract closed 829. With the continuous strengthening of the disk, traders speculation operation increased, the port spot transaction atmosphere has improved. PBF at Shandong port dealt 910-945 yuan/mt, increased 10-45 yuan/mt over yesterday; SSF at Shandong port dealt 600 yuan/mt, increased 25 yuan/mt over yesterday; PBF at Tangshan port dealt 920-940 yuan/mt, increased 20-40 yuan/mt over yesterday; As of Jan. 28, stocks at 35 ports tracked by SMM totaled 149.02 million tons, down 1.07 million tons month-on-week, but less than last week. Mainly from the recent import of ore to the port cargo volume decreased obviously caused by. In addition, the average daily port clearance volume of imported ore decreased by 88,000 tons to 3.087 million tons. During the Spring Festival holiday next week, the average daily port clearance volume is expected to continue to decline. Although overseas mine shipments have decreased recently, port operation efficiency is expected to decline significantly during the Spring Festival holiday, and the decline in port inventory is expected to slow down.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
